Summary

Cybersecurity professional with a strong foundation in QA Automation and AI, transitioning into SOC Operations and Security Engineering. Experienced in active threat monitoring, web application security testing, and building simulated enterprise environments for defensive exercises. Adept at leveraging programming and analytical skills to secure systems against evolving threats.

Work Experience

Offenso Academy **June 2026 - Present**
Cyber Security Trainee *Remote*

- Analyzed network captures (pcap) to identify anomalous traffic and security misconfigurations during active threat monitoring.
- Configured isolated **Windows VM environments** simulating enterprise networks for Blue Team exercises and SIEM log generation.

Aspire Systems Pvt Ltd **Jan 2023 - Jan 2026**
QA / Test Automation Engineer *Kochi, India*

- Engineered 250+ regression and functional test cases using **Selenium WebDriver and TestNG**, reducing manual testing effort by 60%.
- Enforced strict quality gates and integrated RESTful APIs, maintaining a defect leakage rate below 2% across 100+ modules.

Technical Skills

Technical Skills: Network Penetration Testing, Web Application Penetration Testing, API Security Testing, Active Directory Security Assessment, Android Application Security Testing, Vulnerability Assessment, OSINT, Post-Exploitation, AI Security Testing, SOC Operations
Tools: Burp Suite Professional, Nmap, Metasploit Framework, BloodHound, CrackMapExec (NetExec), Mimikatz, OWASP ZAP, MobSF, Postman, Splunk, Docker, Kali Linux
Technologies: TCP/IP, HTTP/HTTPS, DNS, Active Directory, Linux, Windows, Docker, OWASP Top 10, SIEM Fundamentals, KQL

Certifications

Microsoft SC-200 Security Certification | ***Microsoft*** **In Progress**

CompTIA Security+ Certification | ***CompTIA*** **In Progress**

Projects and Labs

Security Home Lab (SIEM & Threat Detection) | ***Wazuh, Kali Linux, Windows Server, Metasploitable*** **Ongoing**

- Architected a self-hosted monitoring stack deploying **Wazuh 4.14.6 SIEM/XDR** to ingest and analyze security logs from Windows Server and Windows 10 endpoints.
- Operated a **Kali Linux** attacker host against lab targets to generate telemetry and practice real-time detection and incident triage.
- Successfully rooted 6 vulnerable-by-design systems (CryptoBank, SickOS, pwnlab, etc.) to understand offensive attack vectors and strengthen defensive postures.

Web Security CTF Challenges | ***Burp Suite, feroxbuster, JWT Forging*** **July 2026**

- Solved 7 challenges in the CMU CyLab Academy web-exploitation track, executing request interception with **Burp Suite**, nested directory enumeration, and path traversal/403 bypass.
- Analyzed client-side authentication mechanisms, demonstrating practical knowledge of **JWT decoding and forging** to bypass vulnerable access controls.

Education

Mahatma Gandhi University Aluva **Ernakulam, India**
Master of Computer Applications (MCA) — Minor in AI *2020 - 2022*
Mahatma Gandhi University Ernakulam **Ernakulam, India**
Bachelor of Computer Application (BCA) — Minor in Banking *2017 - 2020*
