PROFESSIONAL SUMMARY

Software engineer with 3 years of experience engineering web applications and enhancing software quality through test automation, now moving into security operations. Automated over 250 test cases, reducing manual effort by 60% and QA cycles by 35%. Runs a personal blue-team home lab on a self-hosted Wazuh 4.14.6 SIEM ingesting logs from Windows Server and Windows 10 endpoints with a Kali Linux attacker host, and has rooted six vulnerable-by-design lab machines. Completed CMU CyLab Academy's web-exploitation track covering request interception, path traversal and client-side authentication bypass. Currently completing a 5-month cybersecurity program at Offenso Academy, 7 hands-on labs to date across SOC fundamentals and network packet analysis. Seeking a SOC Analyst role, applying the systematic detection discipline of test automation to security monitoring and incident triage.

CORE COMPETENCIES

SIEM Operations (Wazuh) | Security Log Review & Monitoring | SOC Fundamentals | Web Application Assessment | Penetration Testing (Lab) | Network Traffic & Packet Analysis | Linux & Windows System Administration | Test Automation (Selenium, TestNG)

WORK EXPERIENCE

Personal Security Lab

Ongoing

Security Home Lab - Self-Hosted (Personal Project)

Ernakulam, India

- Deployed and configured Wazuh 4.14.6 (open-source SIEM/XDR) as the monitoring stack for a personal security lab, ingesting logs from Windows Server and Windows 10 endpoints.
- Runs a Kali Linux attacker host against Windows targets in the lab, generating telemetry for detection and monitoring practice.
- Rooted 6 vulnerable-by-design lab machines between July and August 2026: CryptoBank, GreenOptic, HF2019-Linux, Metasploitable, pwnlab, and SickOS.

Offenso Academy

June 2026 - Present

Cybersecurity Training Program (In Progress)

Kerala, India

- Completing a structured 5-month cybersecurity program covering SOC fundamentals, network packet analysis, and hands-on defensive security practice.
- Completed 7 hands-on labs to date, spanning SOC fundamentals and packet/network traffic analysis.
- Prepared the technical environment for a Blue Team cybersecurity exercise, setting up a Windows VM and a pcap (packet capture) file for network traffic analysis.

Career Break

February 2026 - May 2026

Career Break

- Career break between roles, followed by a transition into cybersecurity training.

Aspire Systems Pvt Ltd India

January 2023 - January 2026

Associate Software Engineer - Testing

On-site

- Automated 250+ regression and functional test cases using Selenium WebDriver and TestNG over a 12-month period, decreasing manual effort by 60% and shortening QA cycles by 35% for enterprise client applications.

- Maintained a defect leakage rate below 2% across 100+ modules on bi-weekly release cycles by developing and executing comprehensive testing suites using Selenium, JUnit, and TestNG.
- Devised comprehensive test plans and automated test scripts utilizing Selenium and JUnit, accelerating defect identification and supporting the delivery of high-quality software releases for complex enterprise solutions.
- Engineered robust web application features by integrating RESTful APIs and modern UI frameworks, enhancing system scalability and user engagement for Fortune 500 clients.
- Presented quarterly knowledge-sharing sessions for the QA team on Selenium, JUnit, and TestNG, improving bug detection rates across 100+ modules over a 12-month period.

Aspire Systems Pvt Ltd India

September 2022 - January 2023

Trainee

PROJECTS

Wazuh SIEM Monitoring Stack

Home Lab

Self-hosted SIEM/XDR deployment configured to ingest and monitor endpoint logs from Windows Server and Windows 10 hosts, with attack traffic generated from a Kali Linux host for detection practice.

Wazuh 4.14.6, Windows Server, Windows 10, Kali Linux

Boot2Root Lab Machines - 6 Rooted

Home Lab

Gained root/administrator access on six vulnerable-by-design machines between July and August 2026: CryptoBank, GreenOptic, HF2019-Linux, Metasploitable, pwnlab, and SickOS.

Kali Linux, Linux, Windows

Web Security CTF Practice - CyLab Academy & picoCTF

Self-Directed

Solved 7 challenges on CMU CyLab Academy's web-exploitation track: Burp Suite request interception, HTML source and include-file disclosure, content discovery, path traversal and 403-bypass, and client-side authentication bypass including JWT decoding and forging. Ran recursive directory enumeration against picoCTF targets with feroxbuster, and worked through image steganography with steghide and stegseek.

Burp Suite, feroxbuster, steghide, stegseek, Kali Linux

EDUCATION

Master of Computer Applications (MCA), Computer Programming - Minor in AI Union Christian College Aluva, Ernakulam, Kerala, India — 2022

Bachelor of Computer Application (BCA), Computer Programming - Minor in Banking Chinmaya Vidhyapeet, Ernakulam, Kerala, India — 2020

CERTIFICATIONS

DevOps Fundamentals	Smartbridge	2022
Agile Training Module	Smartbridge	2022
Machine Learning	Internshala	2021

SKILLS

Security: SIEM operations (Wazuh), security log ingestion and monitoring, SOC fundamentals, web application assessment, web content discovery and directory enumeration, path traversal, client-side authentication bypass, penetration testing (lab), network traffic analysis, pcap/packet capture analysis, steganography and forensics
Security Tooling: Wazuh, Kali Linux, Burp Suite, feroxbuster, steghide, stegseek
Systems & Platforms: Linux, Kali Linux, Windows Server, Windows 10
Languages & Databases: Python, Java, C++, JavaScript, HTML, MySQL, PhpMyAdmin
Testing & QA: Selenium, TestNG, JUnit, Requirements Analysis, Test Strategy, Test Cases, Test Execution, Regression Testing, Unit Testing, Exploratory Testing, Smoke Testing
